What changes are proposed in this pull request?

The security fix [#10873](#) causes Recipe card display format broken.
This PR fixes it.

How is this PR tested?

Manually test:

Data Profile	Data Schema	Data Preview	Run Summary														
<table><tr><th>name</th><th>type</th></tr><tr><td>tpep_pickup_datetime</td><td>datetime</td></tr><tr><td>tpep_dropoff_datetime</td><td>datetime</td></tr><tr><td>trip_distance</td><td>number</td></tr><tr><td>fare_amount</td><td>number</td></tr><tr><td>pickup_zip</td><td>integer</td></tr><tr><td>dropoff_zip</td><td>integer</td></tr></table>		name	type	tpep_pickup_datetime	datetime	tpep_dropoff_datetime	datetime	trip_distance	number	fare_amount	number	pickup_zip	integer	dropoff_zip	integer		
name	type																
tpep_pickup_datetime	datetime																
tpep_dropoff_datetime	datetime																
trip_distance	number																
fare_amount	number																
pickup_zip	integer																
dropoff_zip	integer

- ☐ Existing unit/integration tests
- ☐ New unit/integration tests
- ☒ Manual tests

Does this PR require documentation update?

- ☒ No. You can skip the rest of this section.
- ☐ Yes. I've updated:
 - ☐ Examples
 - ☐ API references
 - ☐ Instructions

Release Notes

Is this a user-facing change?

- ☒ No. You can skip the rest of this section.
- ☐ Yes. Give a description of this change to be included in the release notes for MLflow users.

What component(s), interfaces, languages, and integrations does this PR affect?

Components

- ☐ area/artifacts : Artifact stores and artifact logging
- ☐ area/build : Build and test infrastructure for MLflow
- ☐ area/deployments : MLflow Deployments client APIs, server, and third-party Deployments integrations
- ☐ area/docs : MLflow documentation pages
- ☐ area/examples : Example code
- ☐ area/model-registry : Model Registry service, APIs, and the fluent client calls for Model Registry
- ☐ area/models : MLmodel format, model serialization/deserialization, flavors
- ☐ area/recipes : Recipes, Recipe APIs, Recipe configs, Recipe Templates
- ☐ area/projects : MLproject format, project running backends
- ☐ area/scoring : MLflow Model server, model deployment tools, Spark UDFs
- ☐ area/server-infra : MLflow Tracking server backend

- ☐ `area/tracking` : Tracking Service, tracking client APIs, autologging

Interface

- ☐ `area/uiux` : Front-end, user experience, plotting, JavaScript, JavaScript dev server
- ☐ `area/docker` : Docker use across MLflow's components, such as MLflow Projects and MLflow Models
- ☐ `area/sqlalchemy` : Use of SQLAlchemy in the Tracking Service or Model Registry
- ☐ `area/windows` : Windows support

Language

- ☐ `language/r` : R APIs and clients
- ☐ `language/java` : Java APIs and clients
- ☐ `language/new` : Proposals for new client languages

Integrations

- ☐ `integrations/azure` : Azure and Azure ML integrations
- ☐ `integrations/sagemaker` : SageMaker integrations
- ☐ `integrations/databricks` : Databricks integrations

How should the PR be classified in the release notes? Choose one:

- ☐ `rn/none` - No description will be included. The PR will be mentioned only by the PR number in the "Small Bugfixes and Documentation Updates" section
- ☐ `rn/breaking-change` - The PR will be mentioned in the "Breaking Changes" section
- ☐ `rn/feature` - A new user-facing feature worth mentioning in the release notes
- ☒ `rn/bug-fix` - A user-facing bug fix worth mentioning in the release notes
- ☐ `rn/documentation` - A user-facing documentation change worth mentioning in the release notes

why `pandas_df.style.to_html(escape=True)`
does not work? What's the issue?

WeichenXu123

I think it is a pandas library bug. We can report it.

harupy on Jan 25, 2024

Member

what happens if we use
`pandas_df.style.to_html(escape=True)` ?

WeichenXu123

It generates the same result with
`pandas_df.style.to_html(escape=False)`

But `pandas_df.to_html(escape=True)`
generates escaped result correctly.

So I think it is a bug.

You can try it by:

```
p1 = pd.DataFrame({'a': ['<div><scri  
</script></div>']})  
  
print(p1.style.to_html(escape=False))  
print(p1.style.to_html(escape=True))  
  
print(p1.to_html(escape=False))  
print(p1.to_html(escape=True))
```
