Contributor

Deprecates the old langchain-hub repository. Does *not* deprecate the new <https://smith.langchain.com/hub>

@PinkDraconian has correctly raised that in the event someone is loading unsanitized user input into the `try_load_from_hub` function, they have the ability to load files from other locations in github than the hwchase17/langchain-hub repository.

This PR adds some more path checking to that function and deprecates the functionality in favor of the hub built into LangSmith.

Hi! Thank for deprecating this functionality.

Would you also please be so kind to change my report from "informational" to "accepted" on Huntr? That way I get the proper remuneration.

Collaborator

**@PinkDraconian** we've contacted Huntr to change the status of your report, and will assess it today to assign a proper CVSS score.

Going forward we ask that if you disagree with a decision and have a good argument for that please reach out to [security@langchain.dev](mailto:security@langchain.dev) prior to filing the CVE, so we can discuss. Filing the CVE effectively blocks users from being able to deploy their applications, without an option to upgrade to get a security patch, and in this case it's dubious that the code actually poses any risk to users.

**PinkDraconian** commented on Mar 7, 2024

My apologies for any inconvenience caused there. I will definitely take that advice for the future.
