Serializing the KV caches using safetensors instead of pickle in Mooncake Pipe for safety.

Note that I just tested the behavior of this class locally, assuming that the received bytes and the sent bytes are the same. @ShangmingCai would be great if you can also check and see if it breaks Mooncake functionality or not.

Hi! Thank you for contributing to the vLLM project.

Join our developer Slack at <https://slack.vllm.ai> to discuss your PR in #pr-reviews, coordinate on features in #feat-channels, or join special interest groups in #sig- channels.

Just a reminder: PRs would not trigger full CI run by default. Instead, it would only run fastcheck CI which starts running only a small and essential subset of CI tests to quickly catch errors. You can run other CI tests on top of those by going to your fastcheck build on Buildkite UI (linked in the PR checks section) and unblock them. If you do not have permission to unblock, ping simon-mo or khluu to add you in our Buildkite org.

Once the PR is approved and ready to go, your PR reviewer(s) can run CI to test the changes comprehensively before merging.

To run CI, PR reviewers can either: Add `ready` label to the PR or enable auto-merge.
