

Segmentation fault in tf.quantization.quantize_and_dequantize #42105

Closed

#42109

mijungk opened on Aug 7, 2020

System information

- Have I written custom code (as opposed to using a stock example script provided in TensorFlow): No
- OS Platform and Distribution (e.g., Linux Ubuntu 16.04): Linux Ubuntu 18.04
- Mobile device (e.g. iPhone 8, Pixel 2, Samsung Galaxy) if the issue happens on mobile device: N/A
- TensorFlow installed from (source or binary): binary
- TensorFlow version (use command below): v2.2.0-rc4-8-g2b96f3662b 2.2.0
- Python version: 3.7.6
- Bazel version (if compiling from source): N/A
- GCC/Compiler version (if compiling from source): N/A
- CUDA/cuDNN version: N/A
- GPU model and memory: N/A

Describe the current behavior

tf.quantization.quantize_and_dequantize produces a segfault when input is a tensor in any shape of float32 or float64 and axis is specified to a large number.

Describe the expected behavior

No segfault

Standalone code to reproduce the issue

```
import tensorflow as tf
tf.quantization.quantize_and_dequantize(input=[2.5, 2.5], input_min=[0,0], input_max=[1,1],
```

Other info / logs Include any logs or source code that would be helpful to diagnose the problem. If including tracebacks, please include the full traceback. Large logs and files should be attached.

Segmentation fault (core dumped)

Hello, is there any chance that vulnerability fix will be applied in versions like 2.3.4?

3

mihairaruseac on Sep 3, 2021

Contributor

Hi. Not in 2.3.4, as the 2.3.x has reached end of life.

It is already included in 2.4.0 and later
