I'm part of the Debian LTS (Long Term Support) Team and I'm working on integrating the fix for [CVE-2022-24439](#) for GitPython in Debian.

After contacting [@Byron](#) privately we determined that [#1521](#) would need a follow-up fix, which I hereby propose in this PR.

I also modified 2 tests to validate the change, but I'm not sure if we want to double-check (multi/non-multi) all the currenttt clone/clone_from tests, so I didn't, but I can do so if necessary.

Block insecure non-multi options in clone/clone_from [5c59e0d](#)

Byron added this to the **v3.1.32 - Bugfixes** milestone on Jul 11, 2023

Byron commented on Jul 11, 2023

Member

Thanks a million!

I think it's sufficient to 'sample' only a couple of test as we know the fix is present for all clones, and I don't think that will change.

I will see to create a new release shortly.

Byron merged commit `ca965ec` into `gitpython-developers:main` on Jul 11, 2023

Great!

I reached out to Skyk to register another CVE for this additional fix.

Snyk didn't answer, so I eventually reached out to MITRE who assigned [CVE-2023-40267](#) to this issue.
