This is a PR from JIZHI, the AI platform in Tencent.

This pr updates the function `GetMatchingPaths` .

The old code will collect all possible path before using any wildcard characters, which will be really slow and memory demanding when matching patterns like "/*". Similar issue was stated in [#40553](#) . The updated function will match the directory while gradually traverse the possible path.

Thank you for your time on reviewing this pr.

@mihaimaruseac

I've fixed the build failures, which are related to paths with
protocol like `file://test` . Could you have another look?
Thank you!

Sorry... I didn't notice that

`//tensorflow/tools/api/tests:api_compatibility_test`
had different error... The new build failure is caused by paths
like `/root/tensorflow/./.*` and I've fixed it.
