

f-string syntax error when importing macro in a template which filename is also a template #1792

✓ Closedrafalkrupinski opened on Jan 16, 2023 ...

With this template structure:

```
/templates/  
+- {% jinja expr %}.jinja  
+- macro_file.jina
```

When `{% jinja expr %}.jinja` imports a macro using `'from "macro_file.jinja" import my_macro'` syntax, `Environment.render` fails with `SyntaxError: f-string: invalid syntax` error message.

Internally jinja concatenates the importing template filename into an f-string, which results with invalid f-string:

```
if l_0_print_helo is missing:  
    l_0_print_helo = undefined(f"the template {included_template.__name__!r} (imported from {included_template.filename!r})")
```

Couldn't reproduce the error using `import "macro_file.jinja" as m` syntax.

Environment:

- Python 3.10.7
- Jinja 3.1.2
